

#### Audit Trail for 1.0 traceability from CAD to Simulation Results

- All CAD & CAE objects with their names
- Different versions of CAD files/drawings
- Trace file of all object changes
- Actual object data

#### Workflow Editor & workflow management

- Digital workflow builder
- Logical relation points
- Automatic & regular execution
- 2D/3D modelling
- Support for multi-threads/cluster & load  
position

#### Benefits

- Improve quality and transparency of early  
on processes
- Make analysis results instantly transparent
- Reduce cross-company silos, maintaining  
process compliance
- Meet requirements and give release into  
manufacturing engineering analysis
- Lower the cost of finding information,  
searching results and preparing reports
- Evaluate and integrate simulation results  
efficiently
- Increase analysis volume analysed that  
allow with a unified methodology
- Enable integration of legacy CAD manufacturing  
data
- Easy software deployment and rapid rollout  
at your organization

## SimData Manager

CAE Data and Process Management for  
Simulation and Virtual Engineering Analysis
